## FILM SANDING VS. PAPER SANDING

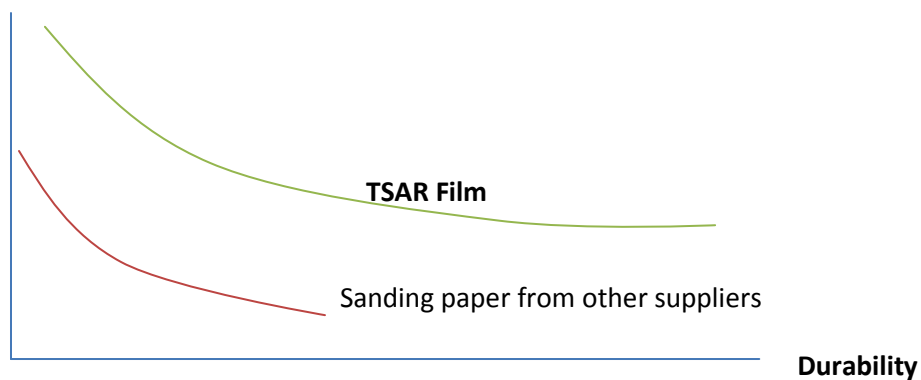

### ¿Why Film?

Film backing sanding discs have longer lasting life in comparison with paper backing sanding discs, being more difficult to be broken. High durability gives long life and this kind of surface brings a perfect finish. Sanding discs on film backing are the best option for dry and wet sanding.

### ¿Why choose TSAR Film Sanding Discs?

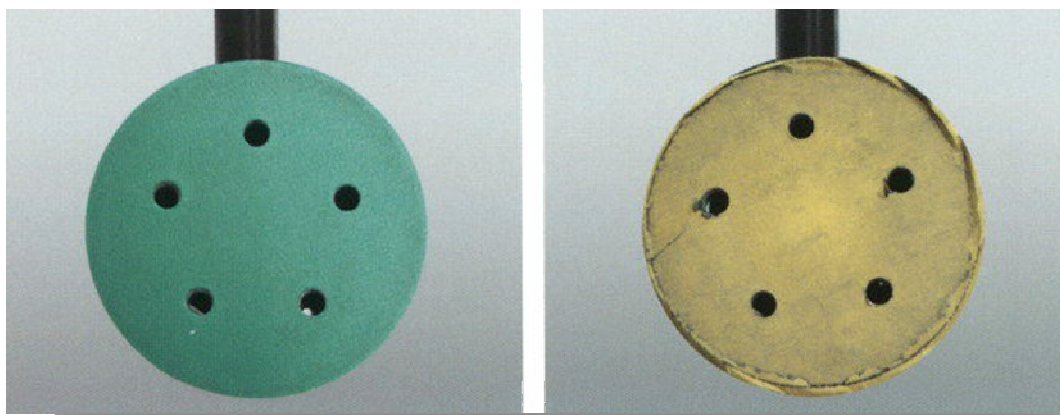

Tsar sanding discs on film backing are made using premium grain in its material components provided with unique open coat steared and high resin adhesion. Its unique sanding material gives longer lasting life and perfect sanding plane.

### Cutting Performance

### Excellent durability

Film backing is stronger and more durable than usual products on paper backing. It is not easily torn during sanding work. It is perfect for sanding corners, edges, irregular shapes and contours. Film guarantees an accurate and correct sanding depth.

Perfect surfaces.

Even when surfaces are uniformly coated with mineral, film sanding gives better finish than paper .

No signs of marks or scratches after sanding showing a plane finish.

Does not fill up as quickly as paper thanks to application of resin adhesion technology.
